

Giant Meat-Eating Plant Found

Botanists have found a giant meat-eating plant called a pitcher plant. This kind of plant usually eats insects which fall inside it. The new pitcher plant so big it can eat rats and lizards. Small children and pet dogs are probably safe because are too big for this new plant. Botanists found this new species in the Philippines on a mountain about 1,600 meters above sea level.

VOCABULARY: Match the correct answers.

- | | |
|--------------|---------------|
| 1. botanists | a. discovered |
| 2. find | b. bugs |
| 3. insects | c. maybe |
| 4. probably | d. kinds |
| 5. species | e. scientists |

READING COMPREHENSION: Choose the correct answer.

1. Who found a giant pitcher plant?
